How to use this comparison chart: Size Scale is the units of measure in AutoCAD. Scale of the largest AutoCAD drawing is the maximum scale, which is 100. Scale of the smallest AutoCAD drawing is the minimum scale, which is 1. Some AutoCAD drawings can be scaled up and down in proportion. On the right-hand side of the comparison chart, scale is displayed as a decimal, with digits to the right of the dot (.) sign. On the left-hand side of the comparison chart, scale is displayed as a percentage. For example, AutoCAD 11 has an 87.8% scale. Canonical scale is the mathematical formula used to calculate the scale. Canonical scale of a drawing equals the maximum scale divided by the minimum scale. For example, the maximum scale of AutoCAD 11 is 100 and the minimum scale is 1. Therefore, AutoCAD 11 has a canonical scale of 87.8. Some drawings can be scaled both proportionately and on a logarithmic scale. Print size Print size is a physical size, in either inches or centimeters, at which the drawing will print when it is printed. Print size is measured from the bottom left corner of the drawing.
