in the race to create the first fully autonomous vehicle. The search giant has unveiled a prototype self-driving shuttle that uses an array of cameras and sensors to navigate a city of the future. The auto-pilot shuttle, unveiled at Google's Mountain View headquarters, travels along a 10-mile track with no human operator inside. Google claims the self-driving technology in the prototype is at a level similar to vehicles currently being tested in other parts of the world, including the UK and Australia. The project, codenamed Project Chauffeur, could become the first self-driving car to be allowed on public roads in the US. Google said it would be the first in the world if its plans are successful. Engineers at the company have already built a small version of the shuttle, in which six cameras capture

images at 1,920 frames per second of the scenes in front of the vehicle. A similar arrangement of sensors is used in the driverless car Google has already been testing on public roads in California. A fleet of the auto-pilot shuttles is being built for testing, which Google hopes will eventually lead to a driverless taxi service. Tim Schmidt, head of Google's self-driving car project, told a1d647c40b

Search the Autodesk Gallery for a workflow or documentation that meets your design process needs. Navigate with ease through the existing number of CAD functions in AutoCAD. (video: 9:30 min.) Extend the reach of your data with AutoCAD File Export. Upload it to the cloud, extract it into a file format and take advantage of other 3D

file formats and display them in AutoCAD. (video: 6:00 min.) Autodesk® AutoCAD® Architecture Design and perform more 3D architecture tasks. Pole Base Coordinates (X, Y, Z) and baselines in architectural drawings are also defined as dimensions. In combination with the dimensioning feature, you can create and dimension complex workflows easily. (video: 1:00 min.) See your 3D data in AutoCAD using the "Architectural View" or "Bottom View" options. (video: 2:00 min.) New wall types can be created with relative or absolute positioning. (video: 2:00 min.) Measure and analyze your 3D data with the newly introduced Measure Tool. (video: 6:00 min.) Projection: Gain new perspectives on your 3D data. Multi-Level Layouts: Extend existing layouts to unlimited levels, avoid

creating single-level layouts and create easy-to-use multi-level layouts. (video: 2:00 min.)

Team Projects: Tackle complex, complex design tasks on-the-go and automatically update your designs. **NEW:** Visualize a design process within a 3D model. **Design tools:** Add sketch lines and colors to your drawings. Choose from different shapes and colors. (video: 7:50 min.) **Advanced**

Camera: Use the slider bar to change the view's angle and see the camera snap to the shape you're selecting. (video: 2:00 min.)

Lighter workload with the new design tools.

Smart Guide: When you draw a line, with a simple gesture you can automatically attach a new feature, add a dimension or add a new point. Annotate on top of a camera.
