The History of AutoCAD AutoCAD is the fourth most popular CAD application in the world. It is one of the world's top 5 revenue generating CAD software programs, with global revenues of \$1.5 billion in 2016.

AutoCAD first appeared in 1982 and was named the Technical and Publication of the Year in the 1985 American Society of Mechanical Engineers (ASME) National CAD Competition. In 1993, AutoCAD

---

became the first CAD application to be marketed to small businesses. Since then, AutoCAD has been used by more than 35 million users in more than 110 countries. The product is distributed by Autodesk Inc., a diversified technology company.

Autodesk also produces other software used in architectural, mechanical and manufacturing industries. Autodesk's history of AutoCAD dates back to 1975 when programmer Gerard De Haan developed a drafting program on an IBM PC. Drawing was done using a

---

graphics overlay, and was limited to 2-D applications. In 1982, De Haan was joined by programmer Bill Beckwith to form a computer-aided drafting (CAD) software company. From its beginning as a small business, De Haan's team grew to encompass hundreds of programmers who worked together in a collaborative environment. Their team consisted of programmers who had worked with each other in other programming fields. In 1983, the team produced its first CAD program for the Apple II

---

computer. This was followed by AutoCAD, the first widely used CAD program for the IBM PC. Business Model Autodesk's revenue comes from three main sources: desktop, mobile, and cloud computing.

AutoCAD is the leading desktop CAD application, with more than 25 million licenses sold worldwide. It is also one of the leading mobile applications, with more than 7.4 million downloads of AutoCAD Mobile in the first quarter of 2019. The company also provides cloud-based services, such as

---

the Web-based DraftSight™ service. In total, AutoCAD is used by tens of thousands of companies. AutoCAD for Beginners AutoCAD is a tool for both professionals and novices. Q: How to save get a string value from a variable in jquery Hi im new to jquery and im trying to get a string from a variable so i can call it in jquery this is my code: var firstid = "19"; var lastid = "19"; var firstid = \$(this).attr('id'); var lastid = \$(this).attr('id'); var firstid = \$(this).attr('id'); var lastid =

---

`$(this).attr('id');` now what i want to do is to use these two variables in jquery but i can't find the right way to do it. hope someone can help! A: you can use local storage if

```
(localStorage.firstid == null ||
localStorage.firstid === '') {
localStorage.firstid = '19'; } if
(localStorage.lastid == null ||
localStorage.lastid === '') {
localStorage.lastid = '19'; } if
(localStorage.lastid !=
localStorage.firstid) { alert('ids have
different values'); } else { alert('ids
```

AutoCAD 2023: Two New Tools:  
Design Area tools help you find and select a particular area or plane and quickly create your drawing. Your options include: One of the best design area tools we've seen. It keeps your units where they should be and checks for accuracy automatically. Create and Edit Spline Curves: Curves are the most common type of sketch that most designers use. In this release of AutoCAD, you can create and edit spline curves. (video: 1:37 min.)  
Simplify your life: With the new

---

Design Area functions, you can eliminate the need to copy and paste geometry or rescale your drawings to align with dimensions. New tools for topology import: Topology-based polygonization is now available for 2D and 3D drawings that include overlapping parts. Topology-based polygonization simplifies the way you're used to drawing topology by removing all the extra steps. Instead of drawing small pieces of geometry and deleting or cutting them, you can create topology-based polygon objects

---

directly from overlapping parts in your drawing. In addition, you can now create topology polylines and use them with other 2D tools and the 3D Topology command.
