History of AutoCAD AutoCAD was first introduced in the late 1980s as AutoCAD LT, a microcomputer-based CAD system running on IBM PC compatible computers. The software was part of Autodesk's existing drafting and design products, but was not part of Autodesk's mainstream product line. In 1991, Autodesk decided to create a standalone product specifically for CAD that would run on personal computers, workstations, and mainframe computers. In 1993, the first standalone software product for CAD was released, and in 1995, the name of the product was changed from "Autodesk Design Review" to AutoCAD. In 1993, Autodesk introduced AutoCAD LT, a stand-alone desktop CAD application. The first release of AutoCAD LT was 2.5 million units, and it began to replace the Autodesk Design Review product. In 1995, Autodesk introduced AutoCAD R13, a MicroStation based CAD product

AutoCAD For Windows 2022 [New]

History The history of AutoCAD Product Key is marked by several products released by Autodesk. The first release of AutoCAD in 1983 was a time-saving tool for CAD professionals. In 1996, 3D modeling in AutoCAD became available to the general public, and in 1998, AutoCAD was released for Microsoft Windows. In 2001, the latest addition to the product line was AutoCAD LT, a PC version of AutoCAD for small businesses. By 1999, the number of AutoCAD users worldwide was over five million. In 2001, more than six million users used AutoCAD worldwide. In January 2008, Autodesk announced the release of AutoCAD 2009, the first complete redesign of the product since AutoCAD 1998. This was in response to the rise in popularity of the graphics tablet as an input device and the increasing importance of parametric modeling in the construction of buildings. More recently, Autodesk released AutoCAD Architecture for 2008, the first revision to AutoCAD Architecture since its inception. This was a major product release intended to give designers and architects the tools they needed to accelerate the design process. In 2009, Autodesk introduced the new function of CAD (computer aided design) software called AutoCAD Map 3D. It was specifically designed for AutoCAD users that need to draw Map or Topo Map. In 2010, Autodesk introduced a major upgrade for both AutoCAD 2009 and AutoCAD LT. This major upgrade addressed the issues of the AutoCAD 2009 design and architectural, and the AutoCAD LT 9.0 and AutoCAD LT 9.1 products. The release of AutoCAD 2012, AutoCAD Architecture 2012 and AutoCAD LT 2012 coincided with the release of Windows 7. AutoCAD was installed by default with the new operating system. AutoCAD LT 2013 was released in 2013. In 2015, AutoCAD was rebranded from Autodesk AutoCAD to Autodesk AutoCAD LT. Product lines Autodesk AutoCAD is one of the most successful CAD software products in the world. Versions Since its initial release, there have been over 100 versions of AutoCAD. These have been designed, developed and released over a period of more than 25 years. In 2017, there were six major AutoCAD products available: AutoCAD 2016, AutoCAD LT 2016
