Have you ever been struggling to remember what that one idea you were trying to get across in your lecture? If you work on your notes after class, they will only go so far. The problem is, they don't help you re-create that memory of the idea the next time you want to use it. This problem is solved by the "Brainio Notes". This is a smart note-taking app that helps you to organize notes, make mind maps, and share them with friends. Brainio is an Android application that comes with a bunch of tools to help you with your notes. It

can turn any text into a mind map, which you can then visualize or export to share with others. The app also allows you to create, save, and organize notes and mind maps. It turns text into a mind map that helps you structure and manage the information in your brain. It brings the power of mind mapping to your phone and tablet. Brainio is a free note-taking software which will help you take notes, outline and build out thoughts, and create mind maps that are visually clear and not cluttered. It is easy to use because you just need to open the application and start writing. The program does more than that by creating and organizing related notes, mind maps, and outlines as you type in your notes. It will also give you reminders, inserting colors and highlighting words that you find important. Brainio Features: Saving Notes Taking notes is a good way of organizing your thoughts and ideas. It can be especially useful when learning

something new or trying to create something. Using the classic Notepad isn't always a good idea, as you will often end up with a congested text that will be hard to read through. Brainio is a program that can help you create and organize notes better. Notes and mind maps Your notes can be both short and complex. When starting, you need to specify the title or header, which usually represents what you are taking notes for. After that, you can create multiple nodes. This is basically where you start putting down the ideas of your plan. If they need any further explanation or contain multiple items or aspects, you can add further sub nodes to round them up. But Brainio doesn't just let you create regular notes. Every time you create something, the program also

arranges it in a separate mind map for easier viewing and understanding. They can also be colored for better differentiating. Share and export If you wish to show your notes to any of your friends, it is easy. The program has a sharing feature where you only need to input their e-mail address to give them access to your writings. Also, if you want to be able to use the notes outside the application, that is possible as well. With Brainio you can export your notes and mind maps to 6 different formats. This last feature is a bit glitchy, however, and it can export multiple copies at once without asking you. It is not the worst thing ever, but it can get a little annoying. It can be useful Overall, the program has some neat features which are definitely worth trying out.

Not only is it easy to use, but it also makes the notes look a lot more creative. Brainio Description: Brainio is a free note-taking software which will help you take notes, outline and build out thoughts, and
