It is a complete browser that is easy to use, lightweight, easy to install and very fast. This version is an update of OhHai Browser...read more... 1. Field of the Invention The present invention relates to a microscope objective lens, a beam expander, and a microscope. 2. Description of Related Art As a standard of visible light microscopy for a recent laboratory, one whose upper limit of numerical aperture is at least 1.0 is in use. A numerical aperture is the sine of a half angle formed by a ray of light (an object light ray) that travels in the direction of an optical axis of a microscope objective lens, and the numerical aperture is a parameter indicating the resolving power of a microscope. The higher the numerical aperture, the higher the resolving power is. The numerical aperture is generally called "NA". The resolving power of the microscope is determined by the wavelength of light emitted by a microscope objective lens, and the microscope is superior in resolution when the resolving power is determined by the wavelength of light. The wavelength of light emitted by a microscope objective lens is longer in the longer wavelength region, and the numerical aperture of the microscope objective lens in the longer wavelength region is smaller than that in the shorter wavelength region. The longer wavelength region in the spectrum of visible light means the range of light having a wavelength of 400 nm or greater, and the shorter wavelength region means the range of light having a wavelength of 400 nm or less. In general, a microscope with a high NA is used for observing fine details of a sample in a range of 400 nm to 450 nm. A low NA is used for observing a wide range of a sample. A liquid immersion microscope (an immersion microscope) and a super-resolution microscope which have an NA of 1.4 or more are also in use. The transmittance of light having a wavelength of about 500 nm is about 50%, and the transmittance of light having a wavelength of about 400 nm is about 20%, so that the transmittance of light having a wavelength of about 450 nm and that of light having a wavelength of about 500 nm at the light-entrance surface of the microscope objective lens are low. Accordingly, for light having a wavelength of about 450 nm and that of about 500 nm, there is a high possibility that the light is completely absorbed by the microscope objective lens, so that the light does not reach a sample. Therefore, in order to observe details of a sample, the efficiency of use of

OhHai Browser - Corporate Edition is a lightweight web browser that packs basic functionalities for helping you surf on the Internet. Keeping it on USB flash drives Taking into consideration the portability status of the tool, you can store it on portable devices. Running it implies only opening the executable file. You can uninstall it using a simple deletion task. Simple design The program adopts a clean layout where you can open multiple tabs. The multi-tabbed environment doesn't make a very good impression, as it needs refinements. Creating or deleting tabs can be accomplished using the built-in buttons from the main window, right-clicking on a particular tab, or pressing predefined hotkeys. The tool does not embed buttons within tabs for helping you open or close them so this slows down your navigation. In addition, you are allowed to delete or duplicate tabs, input a user-defined address, go to the next or previous webpage, as well as refresh the information with a single click. Configuration settings OhHai Browser - Corporate Edition gives you the possibility to lock the web browser by password-protecting it. On the downside, if you close the web browser and re-open it, the tool is not able to remember the security settings so you need to set up the password each time you run it manually. A few configuration parameters help you specify the homepage and add a custom image from your computer that is displayed in the background when you activate the locking mode. In addition, you can work with simple web development tools. Performance OhHai Browser - Corporate Edition works pretty fast most of time, including when it downloads files. It doesn't eat up a lot of CPU and memory so the overall performance of the computer is not hampered. It doesn't offer support for advanced functions, such as private browsing mode, cookie and history deletion, bookmarks, pinned tabs, built-in download manager, extensions, and autofill for web forms, just to name a few suggestions. Bottom line All things considered, OhHai Browser - Corporate Edition implements basic features for helping you navigate on the Internet and can be used by beginners as a starting point before switching to more advanced web browsers, such as Firefox, Chrome, and Opera. Development: OhHai Browser is also a good choice for web developers as it supports the HTML5, CSS, and JavaScript, letting you build cross-browser applications.
