#### **What's New in the?**

Snapfish is a photo sharing website that offers its users extensive features, for sharing their photos in a very few seconds, and reaching a wide audience all around the world. Snapfish is designed to offer its users the possibility of sharing their photos using one simple interface, without requiring any technical knowledge, or constant use of the photo browser. There is also the possibility of allowing other users to view and comment on a picture, as well as looking at its ratings. Users can also make their content available to editors, or at least they can see which ones they have already been approved, so that they can discuss the topic and make sure that their opinions coincide with the settings of their photo. Connecting Lightroom to Snapfish and hosting them on the site The Snapfish-Lightroom plugin for Lightroom helps users to make and upload their photos to Snapfish in a very easy to use and intuitive way, and it provides a series of options and pre-designed templates to make the process even faster and easier. As an added bonus, the plugin can also allow users to share the photos they upload by e-mail or any other possible means, and even appear on the service's homepage by simply clicking on one of the suggested options. The plugin will create a new album for each upload, but it will not replace the existing albums, since that is something that needs to be done from the Snapfish website itself. This plugin has two main options, namely the option to upload photos by the default choice, which is Snapfish, and the option to upload them via e-mail, or simply to share them by other means. If it is decided to upload the photos in Snapfish, the options on the main window are the following: Target. This lists the service options that can be selected, namely Snapfish or one of its
