LanMan is a small lightweight, portable and powerful software utility that has been developed to assist you in the creation of Network Neighborhoods. Network Neighborhoods are a simple mechanism for you to access files and folders on the network computers. Through this small utility,

you can create and customize a number of Network Neighbors and then add them to your Windows Desktop. The application comes with many built-in features, including:

- Create a new Network Neighbor.
- Delete a Network Neighbor.
- Change the name of the Network Neighbor.
- Set a password for a Network Neighbor.
- Set a custom path for a Network Neighbor.
- Set the icon of the Network Neighbor.
- Create a subfolder in your current Network Neighborhood.
- Switch between multiple Network Neighbors.
- Rename a Network Neighbor.
- Delete

a Network Neighbor. Once you click on the "New" button, you will be presented with a small window that looks similar to the one in the picture below. You can specify the location of your computer and the full path and name of the folder that you want to add to the Network Neighborhood: Click on the Add button and your computer will be presented with an opened network connection to the specified computer. Once the connection is established, you will be given the chance to enter the password of the network account: You will also be given the

opportunity to specify the name of the new Network Neighbor that you are creating: After that, you can simply click on the OK button to confirm your action. The tool will then create a shortcut to the newly created Network Neighborhood and display it on your desktop. Once you click on it, you will be prompted to enter the password that was specified earlier. The password is required to access the newly created Network Neighbor and ensure that nobody else will be able to do so. Note that you can add as many Network Neighbors as you wish and you can

switch between them through the small Menu that can be found on the bottom right corner. Also, you can add a subfolder to any of the existing Network Neighborhoods using the same technique. LanMan Review: The application is extremely simple and has been developed to assist you in creating new Network Neighborhoods. With a few clicks, you can quickly create a Network Neighborhood that will give you quick access to the specified computer: You will then be able to specify the name of the new Network Neighbor that you are

TrayDir is a lightweight utility that allows you to access files and folders from the System Tray and hence, enabling you to keep your desktop clean and uncluttered. You gain quick access to all directories and subdirectories and can create, delete and move them around. Following a quick and uneventful installation, you can access the application from the System Tray. As you probably hinted, the tool does not come with an interface per se, but rather a GUI that allows you to access the folders

on the desired location on your drive. By default the application displays the directories from the desktop, but you can easily change that from the Settings by changing the path.

Adding a new path is as simple as clicking the plus button and then accessing the File or Folder buttons to add the new location. You should know that you can add as many instances as you need and change their position – based on importance or workflow – with the arrows. It would have been nice if these buttons were slightly bigger, as you can easily misclick. Rename the shortcut

instances based on your needs and preferences. It is worth mentioning that instances can be customized so that there is no confusion about the folders and files that you want to have quick access to. Therefore, when adding a new instance, you can specify a name, add an icon and specify if the shortcuts should Run as Admin. At the same time, you can display the file extensions, expand the first path and grant yourself the possibility to explore folders in TrayMenu. Settings-wise, the application does not include too many options, which is not a big

setback considering the nature and role of the tool. Therefore, you can make sure that the tool starts with Windows and is minimized, select a preferred menu sorting – with the folders being displayed top or bottom – and display the icons in TrayDir.
