Our next goal is to expand the linear combination in . By , we have

$$\ell^{\left(0\right)}_{n\left(\lambda\right)} + \frac{\gamma}{\alpha - \beta} \ell^{\left(1\right)}_{n\left(\lambda\right)} = 0.$$

The operator $H^{\left(0\right)}_0 - \lambda I$ is invertible for $\lambda \in \mathbb{C}$, and therefore is satisfied for the function $\ell^{\left(0\right)}_{n\left(\lambda\right)} = 0$. We consider the function $\ell^{\left(1\right)}_{n\left(\lambda\right)} = \lambda$, and divide the equality in by $\ell^{\left(1\right)}_{n\left(\lambda\right)}$, obtaining

$$\left(\alpha - \beta\right) \ell^{\left(1\right)}_{n\left(\lambda\right)} - \gamma = 0.$$

The solution to is $\ell^{\left(1\right)}_{n\left(\lambda\right)} = \gamma / \left(\alpha - \beta\right)$, and therefore

X-VideoLAN was designed as a portable replica of VLC that doesn't need installation and can be carried on a removable drive and launched on any machine. It does not write to the registry and the impact on system resources is minimal. X-VideoLAN is not the first approach of this kind on the software market. It enrolls the same trend adopted by PortableApps, who, in its turn, also developed a to-go version of VLC that you can find here. The goal is ultimately the same: to take VLC's installation files and modify them in such a way that the resulting package is a portable one. The inner engine is preserved, which means you will get the same functionality and performance that VLC sports without being required to install anything. Now that we've established that there are no functionality differences whatsoever, the fact that the interface is the same as VLC's won't come as a big surprise. Menus, toolbars, buttons, Preferences, they all look the same as the version produced by VideoLAN. Therefore, if you're already accustomed to VLC's behavior, you should have no trouble at all maneuvering X-VideoLAN. With it, you can play virtually any media file and since it relies on its own architecture of codecs, you won't be required to provide any additional media filters. It can also be used as a video converter and a media streamer, as well as to improve acoustics and edit motion images by applying several effects. Other highlights include network sync, resamplers, demuxers and support for multicast, IPv4 and IPv6 in case you'll use it as a streaming server. In conclusion, if you opt for X-VideoLAN, you'll get a non-intrusive and easier to implement media player. The package is updated each time a new release of VLC is issued, but the downside is that it is made available after several days and at times, even weeks.
