The .NET Assembly Dependency Analyser is a utility to help with diagnosing and documenting inter-assembly dependency issues in a .NET application. A tool is provided to demonstrate inter-assembly dependency issues in the real world scenario of a .NET application. It provides a sample .NET solution to help understand how dependency relationships between .NET assemblies are represented in the Solution Explorer and by the Analyzer tool. A: Here is an article which shows how to do this (in C#): A: [...] How can i do this in VB.Net? By having your first thoughts be: "Oh, man. How stupid was that. VB.NET is much more similar to C# than C++". ;-) There is some in-between between C# and VB.Net, but they are two entirely different language, and this can't be mated, in any fashion, or even close. Thing is: VB.NET is far more than a superset of C#. VB.NET has too much stuff built-in to ignore. VB.NET hasn't been "made" in almost two decades. It still has support on

Windows Server 2003, so... I doubt that Microsoft still cares about it. VB.NET has better support in many cases than C#. VB.NET is the supported language in MSDN documentation (just google it). So, having that said, here is a simple VB.NET code that shows how to find and output the Inheritance Hierarchy using Reflection: ' The following code is merely for demonstrational purposes. ' Don't use this code as it's totally unsolvable. Public Class InheritanceHierarchy Public Shared Function GetInheritanceHierarchy(ByVal AssemblyPath As String) As List(Of InheritanceHierarchy) Dim type As Assembly = Assembly.Load(AssemblyPath) Dim typeName As String = type.FullName Dim asseClasses As List(Of InheritanceHierarchy) = GetInheritanceHierarchy(typeName) Return asseClasses 1d6a3396d6
