KEYMACRO for OpenOffice.org is a useful tool which can modify key-maps. Hey community I created a font list a while ago and it's still working! Does anyone know how I can attach it here for others to use? And I'm using OpenOffice.org 3.0.1, if that matters. Thank you Another problem, when I try to add a font from the toolbar it wont' let me... I think I need to log on to some site, but I can't remember where. I've tried the forum, I've tried the help, and I can't find it anywhere. It just wants me to select the font to load. I have had a few problems in the past with other browsers being more stable than Firefox and I would like to know if the problem still exists or if it has been solved. (Because the browser that I have is not as stable) Could anyone confirm the above? "Ok, maybe for some reason the terminal is choking on your fonts. Try this, change your font settings to Ubuntu 10.10 (Lucid), try it, see if it works, then change them back to Ubuntu 10.04 (Lucid) and try again. If the font settings don't work, try deleting the.conf files in your home folder." Greetings to the community. I need some help with installing Office 2003 on a Pentium III computer. The computer has been upgraded to Win XP and Office 2000. I would like to install Office 2003 on a USB key and use it to run many of the Excel and Word macros that have been installed on the old computer. (for example: Excel table builders, formulas, macros, etc) Hello all, I am hoping to get some help with this. I have downloaded and installed on my home PC the Openoffice.org 3.0.1 Final release. My problem is that when I launch Openoffice.org 3.0.1 I get a message that says my version of P.O.S. is not supported. Can someone please give me an answer on how I can resolve this problem. I have a computer with Windows 2000 installed and I need Openoffice.org to work on that PC. Dear community, I am using an AD 550 Centrino laptop, currently I have updated the softwares. I wanted to try Openoffice.org 3.0.1, in the advanced options it says x- 77a5ca646e
