ReverseEngineer.NET is a software tool developed in order to assist individuals in reverse engineering binary applications. It comes with a huge database of popular software applications, which, when run, will output an easy-to-read structure of each app, including class names, methods, file paths, and so on. The program can also extract certain class properties, static variables, main method, and so on. All of this can be extracted, translated, or compared with other applications. Its database is updated daily, and to date it contains several hundred thousand pieces of information. Separate and independent from any particular application, RE.NET can assist you in doing your homework, because it can generate code to be used in your future programs.
