In the accompanying above-referenced application, the disclosure relates to the discovery that a number of potassium channel inhibitors commonly used in cardiovascular pharmacotherapy or toxicology, such as for heart failure, cause QTc prolongation and pro-arrhythmia, suggesting that QTc interval may be a useful predictor of TdP occurrence. We have also shown that there are multiple T-type calcium channel (TTCC) subunits expressed in cardiomyocytes. The TTCCs participate in the repolarization process and it is hypothesized that dysfunction of TTCCs may have a causal role in prolongation of the QT interval. It is therefore possible that TTCC inhibitors could also be a cause of QTc prolongation and other arrhythmias. This may be especially relevant for cardiac arrhythmias in which TTCCs predominate (i.e., TWIK-related acid-sensitive K+ channels, TREK-like-1 and TREK-1). It is therefore an object of this invention to provide a method for identifying compounds that specifically affect the Kv4 channels and that thereby, for example, prolong the QT interval. Gadu-Gadu Lite is a lightweight and simple app that offers users access to Gadu-Gadu, Tlen and XMPP networks. The app is useful for chat, instant messaging, audio or video chat and file exchange. It also provides users with a way to receive messages, read messages, view contacts and share files. The app consists of a proxy which redirects all Internet traffic through a third party server, keeping the original IP address of the source host. Gadu-Gadu makes up the vast majority of the total traffic using its own client, Gadu-Gadu Lite uses an open source port of the server, so if you have installed it on your computer or phone, you will automatically be able to connect to the network. If the subject of the conversation is Gadu-Gadu, Gadu-Gadu Lite uses the auto-detection functionality to detect Gadu-Gadu in the network, otherwise it would show Gadu-Gadu without the need to do anything. This works very well, but we have not tested if it works as well in Tlen, XMPP and other networks. Contacts In Gadu-Gadu Lite for Android, you can manually add new contacts or import contacts from CSV, CSV/OOXML, and QRC files. Each contact in the app has a name, an e-mail address, a phone number, a status, and you can choose to view additional information, for example, Gadu-Gadu friends. Gadu-Gadu Lite also allows you to send Gadu-Gadu messages, call Gadu-Gadu and initiate a voice conversation. Messages To send a message in Gadu-Gadu Lite for Android, you have to type the text, the name of the contact and the smiley icon or the emoticon icon to choose. Other options are available, such as the name of the recipient, the subject, and more. Gadu-Gadu Lite also provides you with the option to send a file, a contact image, a location and a group. You can also manage messages, folders and notifications.
