In the following tutorial, we're going to use Adobe Photoshop CS6 to solve a Photoshop problem that's keeping us up at night: adding a cartoon type of fun to a digital photo. Steps [00:01:54] Video transcript [00:04:05] Let's look at what we're going to be doing. We're going to be adding a simple cartoon effect to a photo with a few of the features of Photoshop. [00:04:34] So let's open up our photo that we're going to add this cartoon to. The photo's in this folder on my desktop here, Art3 from a previous project. So I'm going to load that into Photoshop first. [00:05:01] And so let's open up Photoshop here. The photo's on the top of the stack of files. [00:05:13] And just make sure you save it as a JPEG. I'm going to select this face there on the top layer. So I can see it's three layers from the bottom. So that's Layer 1. Layer 2 is the layer below. And Layer 3 is the one above it. [00:05:32] Now, let's turn off the visibility on the layers so we can see the layers underneath. So here's Layer 1. [00:05:45] And over here, Layer 2 is visible on the top right. So this is Layer 3 here. [00:06:04] So once we're done here, we can save the file as a JPEG. Now, to make a cartoon effect like this, we're going to be using the Make Cartoon or Make Lego type face. So let's select that from the icon library. We'll close that. [00:06:22] So now we're going to be able to click on the new cartoon type face. So I'm going to click on this one here. And you can see I can add more. So we're going to keep selecting. And I'll keep adding them until I get one that I think looks good. So I'll go to the right here. [00:06:51] Now, we can also access some different types. I'm going to add this one here. This one will just be a straight line. The second one, as you can see, it's going to be more of a w

Intravesical paclitaxel and cisplatin in advanced bladder cancer: results of a phase II study. To evaluate the efficacy and toxicity of intravesical treatment with the anticancer drug paclitaxel (Taxol; Bristol-Myers Squibb Co, Princeton, NJ) and cisplatin in patients with advanced bladder cancer. From December 1992 to August 1996, 60 patients with recurrent, bilaterally refractory or metastatic transitional cell carcinoma of the bladder were treated with intravesical paclitaxel and cisplatin. Fifty-seven patients received at least 1 cycle of treatment. Intravesical paclitaxel was administered at a dose of 175 mg (AUC 5) over 2 hours for 10 consecutive days, in the presence of benign urothelium and mucus. Each cycle was immediately preceded by instillation of a 50-ml solution of 2% potassium permanganate (Citrucell 2000, Unimar, Nainville, France) for 2 hours, and intravesical cisplatin was administered at a dose of 70 mg in 50 ml of 0.9% sodium chloride for 6 consecutive weeks. The primary endpoint was progression-free survival, defined as the interval from study entry to the first documented clinical or radiological evidence of progression. Secondary endpoints included tumor response rate, overall survival, and toxicity. Thirty-eight patients (64.4%) had measurable disease, and 66 of the 120 evaluable cycles (54.6%) were well tolerated. Four patients (3.3%) received no treatment for >or=1 week because of clinical toxicity, and 1 patient received a treatment-limiting nephrotoxicity. There were 15 cases of grade 3 toxicities (25.0%). After a median follow-up of 15.1 months (range, 0.2-43.4), the median progression-free survival for the whole group of patients was 13.1 weeks (95% confidence interval, 7.8-18.4) and the median survival time was 20.6 months (95% confidence interval, 14.6-26.7). The 2-year and 3-year progression-free survival rates were 47% and 28%, respectively. The two-year survival rate was 55%. A good response was observed in 19 patients (31%). Our study provides preliminary evidence of the good tolerability and efficacy of the sequential administration of intravesical paclitaxel and cisplatin for the treatment of

Q: How can I find out the color of a parameter from a sound file? I have the following doubt: I have a list of sounds (sound file A) that is being played through a MediaElement. The problem is that when I use SoundPlayer, it doesn't have a property or method for obtaining the color that is playing. How can I obtain the color of that sound? For example, if I have a sound like the following one: I want to know the color of that song. I am using a Windows 8 app, programming in C#/XAML. Any help will be appreciated. Thanks. A: A quick workaround is to open the sound file in a third party audio player that has a means to fetch the PNG metadata of the Sound. There are several open source cross-platform audio players that have this feature: Audacity does not. Cubasis does. EqualizerXP does. MediaGoblin does. In this case, I use EqualizerXP. If you want to read the PNG metadata of the Sound player, you may have to write a .NET class to read PNG metadata. You can use the Sigil tool to make the file format and encode the PNG metadata into that file, and then get the PNG out of that file. In this case, there is a public method to get the PNG image of a file. You could use it to read that PNG image and get the color.
