Markup Assist builds on the ability to quickly import text and graphics into AutoCAD. To use this feature, click the Add Text button and choose "Markup Assist." When you press the Add button, the tool places a prompt asking if you want to import the text, graphic, or both, based on your selection. Markup Import also lets you import and incorporate comments and revision histories into your drawings. When you receive comments on an AutoCAD drawing, simply add the comment to the drawing by clicking the "Insert comment" button. Markup Assist is also a great way to import and incorporate feedback into your drawings. With just a few clicks, you can import feedback from an external text or graphic file and add it to your drawing. A drawing interface displays the text or graphic along with the comments, so that you can easily see the changes that have been made. You can then accept or reject the new content by clicking the "Accept" or "Reject" buttons. Dimension Edit: You can now create dimension lines that span two drawing objects. Use the Dimension Line command to choose the first object, then click the "Create" button. Next, click the second object and drag the dimension line to the new location. You can also use the Dimension Line command to add dimension lines in the opposite direction. In this case, start with a horizontal or vertical dimension line and drag the line downward to create a diagonal line. A new option in the Dimension Line dialog box lets you specify that a dimension line extends a single layer to multiple layers. 2D Object Snap: You can now control the type of 2D object snaps in AutoCAD. In the traditional snap types, you can snap to one or more of the following items: A selected object. An object within the same layer as the selection. An object in a neighboring layer. An object on the same sheet as the selection. An object on the same sheet in the same drawing. An object on the same sheet in a neighboring drawing. An object on the same sheet in the same drawing or neighboring drawing. An object on the same sheet in a drawing in the same drawing set.
