In Visual LISP Visual LISP is an object-oriented extension to the LISP programming language. For more information, see Visual LISP. In VBA VBA provides the AutoCAD object model in the ObjectLibrary class, which is in the Microsoft Visual Basic for Applications (VBA) type library. VBA supports the majority of the AutoCAD-specific functions. For information on the AutoCAD types, functions, and constants, see AutoCAD Visual Basic. In .NET The Microsoft AutoCAD type library contains types that can be used in .NET programming languages. In ObjectARX ObjectARX is an object-oriented API in the AutoCAD type library. This class library is implemented by third-party developers for AutoCAD add-ons. AutoCAD RTU (released as of AutoCAD 2010) includes ObjectARX. In addition, AutoCAD provides some basic functionality for use by 3rd party developers, either in the form of classes that can be found in the type library, or .NET assemblies. The functionality in this basic level is available in both the C++ and .NET environment. The Automation Reference Topics are also located in the "Application Programming Reference" of the application. These topics describe the APIs for customizing AutoCAD.
