Visual LISP Visual LISP (Visual Programming Language) was introduced in AutoCAD Crack For Windows R13 and supports programming using GOTO and forms (Function Module). New in AutoCAD R14, Visual LISP is now a well supported script language that supports more efficient programming. The Visual LISP IDE has been integrated into AutoCAD, so it's now easy to create, debug, and maintain scripts. AutoCAD's ability to support multiple file formats and language formats allows for a high degree of portability. LISP source code is stored in the .lsp file. The .lsp extension is used for AutoLISP but is not necessary for visual LISP. In AutoCAD, Visual LISP is a scripting language that allows a user to create, modify, debug, and compile a user-defined script or macro. Visual LISP script files are called *.lsp files. AutoLISP files are called *.lsp files. AutoLISP files can also be written in Visual Basic or Visual C# programming languages. Visual LISP and AutoLISP are similar in terms of syntax, but they are not compatible. Visual LISP supports many programming constructs and AutoLISP is a "lesser" language. Visual LISP supports multiple programming formats. Although Visual LISP files are typically saved in the *.lsp file extension, they can be saved in the following file formats: . Project files, which contain the AutoLISP and Visual Basic or Visual C# source code. Script files, which can be compiled by specifying the "Build script file" command. Text files, which are human-readable. Text files, which are machine-readable. *Saved in .lsp file extension. A single Visual LISP source code file can be compiled into multiple compiled form files, scripts, or project files, which then can be loaded in AutoCAD. AutoCAD Visual LISP syntax supports Python and JavaScript. Both of these scripting languages are used extensively throughout the Autodesk product line. Python Python is a powerful high-level, interactive programming language that has been available since 1995. While AutoCAD supports only procedural programming, it has been known to be used for rapid prototyping and 3D modeling. In the same way that programmers write scripts in ca3bfb1094

I want to return a list of items from a post call. I have the following code, which returns an array of objects in the onComplete function in the AJAX call. However, I can't access that array in the other script file, so my list never gets populated. Is this possible? \$.post(uri, { "action": "get_json", "start": start, "end": end }, function (result) { var items = result.data.data; list = items.map(function (obj) { return { "id": obj.id, "name": obj.name, "price

What's New in the?

The new Markup Import and Markup Assist dialog box allows you to send drawings that are already marked up from a paper or PDF source. By adding to existing drawings, you can incorporate changes from one drawing to another and avoid redrawing parts of the drawing when designing from the CAD environment. Select this dialog option, then specify an email address, and send your drawing to the email address. When you receive the email message, you can open it in AutoCAD and import the drawing. Drawings and other files can also be imported directly from a browser. When you import your drawing and mark it up, you can use the Markup tabs to mark up the drawing with notes, arrows, images, and other features that can then be easily reused. Markup Assist: Use the new Markup Assist dialog box to mark up drawings in a variety of ways. (video: 1:30 min.) Mark up drawings using the tabs in the dialog box, and automatically apply the changes to your drawing. The Markup tabs include: Notes - insert a simple note that can be associated with your drawing and visible throughout the drawing. Arrows - insert an arrow that you can specify direction, scale, and color. Scale - insert a horizontal or vertical scale that can be scaled with the drawing. Image - insert an image that can be easily reused. Thumbnails - use a thumbnail image to display a small version of your drawing, so you can quickly select from multiple drawings. Import/Export - use Import/Export to attach your drawing to an email message or export it to a project file. Marks - insert marks on your drawing that you can use later to quickly identify particular features. When you use Markup Assist, you can also specify the location of the mark on the drawing, and the type of mark, such as arrows, scale, or image. You can use an image to display a thumbnail of the mark on the drawing. You can use the Markup tabs to mark up a drawing using the existing drawing tabs, such as the Drawing, Customize Drawing, Annotate Drawing, and Symbols tabs. New Options for the Annotate Drawing tool: Increase the number of annotation lines to display and number the lines. (video: 1:22 min.) The new Annotate Drawing dialog box includes options for:
