The invention relates to a clamping apparatus for clamping a very thin metal sheet, in particular a thin metal plate, to a workpiece. In particular, the invention relates to the clamping of a metal sheet to a reticle before the reticle is sent to a dry etching system that operates on the metal sheet. The metal sheet is preferably a silicon wafer used in the manufacture of semiconductor devices. In the manufacturing of semiconductor devices, a process of etching a metal or metal alloy deposited on a silicon wafer surface is often used. The metal or metal alloy that is etched may be for example, aluminum, copper, or gold. FIG. 1 illustrates one possible prior art arrangement used for etching a metal (or metal alloy) layer in a semiconductor manufacturing process. A semiconductor wafer 10 is attached to a spindle 12, which is typically a motorized spindle, and which is positioned below a platen 14, which is, in turn, seated on a chuck 16 that is mounted on an arm 18. The chuck 16 of the arm 18 is typically controlled in one of a number of ways. In one arrangement, the chuck 16 is attached to the arm 18 and the arm 18 is controlled by an external robot 20. In another arrangement, the chuck 16 is mounted on the end of the arm 18 and is controlled by an external robot 22 that moves the chuck 16 about a motion axis 24. Also, in a third arrangement, the chuck 16 is not attached to an arm 18. Instead, in that arrangement, a ring 26 is mounted about the chuck 16, a motor 28 rotates the chuck 16, a nut 30 clamps the chuck 16 on the ring 26, and a fluid motor 32 drives the nut 30. Any of the arrangements described above for moving the chuck 16 are described in U.S. Pat. No. 4,935,875 to Russel C. Daniels, Jr. et al., entitled xe2x80x9cApparatus for Locating and Securing Semiconductor Wafersxe2x80x9d, assigned to the assignee of the present invention and incorporated herein by reference. Another example of a prior art arrangement of this type is shown in U.S. Pat. No. 5,237,624 to Rashid Malik et al. The wafer 10 has a layer of metal (or metal alloy) that has been deposited on a silicon wafer surface and then etched to form a
