※ For details, visit Q: Why is my Google Webmaster Tools "Page not indexed" issue resolved? I have a website (www.baldbrothers.com) that was giving the "Page not indexed" error. (Google says I have about 15,000 uniques over the week) I'm not sure why I need to add all these images to the robots.txt file:

```
robots.txt Crawl-delay Disallow: /out Disallow: / Disallow: /api
Disallow: / Disallow: / Disallow: /images Disallow: / Disallow: /dev
Disallow: /out Disallow: / Disallow: /pods/ Disallow: / Disallow: /pb
Disallow: /404 Disallow: /includes/ Disallow: / Disallow: /post
Disallow: /archive Disallow: / Disallow: /rss Disallow: /
```

After adding all these images to the robots.txt file it fixed the problem. No I don't want to have to add all these images to the robots.txt file. How do I not have to add all these images in the robots.txt file? A: Your last line Disallow: / is valid and should be fixed in your robots.txt. The problem was likely caused by some other crawler that loaded all of the images and/or pages on your site
