Sansa Firmware Updater

You can take advantage of the automatic update feature that checks Sansa firmware and install new firmware files on your Sansa player. With this firmware updater you can up-date and sometimes downgrade your Sansa player firmware to a specific firmware version. The firmware updater stores the old firmware files in internal Memory for future usage. To use the updater: - Connect player to your computer and run Sansa Firmware Updater - Sansa Firmware Updater will check for updates Sansa Firmware Updater will exit if: - Your device is not connected to the computer - Sansa Firmware Updater finds that your player is not in MSC mode - Sansa Firmware Updater finds that your player firmware is already the latest. In some special cases (eg: changing firmware version), you need to restart your player to re-detect your new firmware. In other words, after you run the firmware updater, you have to disconnect the device and reconnect it to the computer. Sansa Firmware Updater also supports the automatic firmware update and downgrade feature. In this case the user must have at least 4GB of free space on the device to perform the downgrade, this is because the upgrade and downgrade firmware files are the same size, but have a different extension (.fw2 &.fw1 respectively). Please be aware that the downgrade feature is limited to firmware version 2.11.0 or lower. Sansa Firmware Updater is free to use, no registration is required. Just install it, and it will detect your Sansa player, and start the firmware update process. It will update the firmware by downloading the firmware files in the SD card, and un-compressing them. After firmware update is complete, it will update your device name, firmware version, and icon image. Buttons will be disabled, the player is still factory new and you will be unable to play music. After the firmware is updated, press cancel or continue to start other operations. This program does not erase the firmware files, nor does it affect the firmware version on your Sansa player. Sansa Firmware Updater will now start to update the firmware. After firmware update is complete, it will update your device name, firmware version, and icon image. But
