Still Life 2 [PC Game ITA - ENG - GER - FRA Hack Tool Free DownloadQ: How to make new empty folders within Subversion? I have a single text file with a list of folders, one folder per line. I like to commit this file to a SVN repository, but I have no idea how to make the correct folder structure within the SVN in order to store the different folders. Example: Project1 | \-- dir1.txt \-- dir2.txt Project2 | \-- dir3.txt \-- dir4.txt I like to create this folder structure within the SVN repository, how can I do this? Thank you! A: You can add an empty folder structure by using the svn mkdir command: svn mkdir dir1.txt dir2.txt

dir3.txt... There's a list of common commands and their options here. (If you want to have this available in your diff window too, you can use Subversion Diff. I don't know how to make the diff window show this, but Subversion Diff shows this extra status line. You can press \$ to see more details of the diff.)

A: Using the subversion command line tool (svnadmin and svn) you can use mkdir Usage: mkdir -p [-d] dir1.txt Example: svn mkdir /path/to/dir1.txt It does not have to be in the root directory. // // Generated by class-dump 3.5 (64 bit). // // class-dump is Copyright (C) 1997-1998, 2000-2001, 2004-2013 by Steve Nygard. // #import "
