Managing media When you save images to your computer, they are always saved in the JPEG format, meaning that the file is optimized for faster file transfer and web use. JPEGs store smaller files than other image formats, such as TIFF or RGB, so it makes sense that a JPEG is a good choice for web use. Some people, however, prefer the smaller file sizes of TIFFs or RGB, so you may want to consider saving images in other formats as well. Photoshop Elements 9

Earlier this month, I spent several days roaming the fields of Costa Rica and northern Panama. It was an adventure. Now I'd like to revisit the region and catch up on some of the most popular sites. In addition, it's a good excuse to look at some gorgeous landscape shots. "Google Fiber has ended its build-out in Austin, Texas," the company said in a statement to The Verge. "We're committed to bringing fast, reliable and affordable internet access to all Americans—especially those in rural areas and other hard-to-serve places." It's a disappointing end to a project that was something of a pariah for the tech sector. While it was intended to help Google gain market share and solidify its reputation as a tech giant, Google Fiber didn't really do any of that. The Austin project was a blatant attempt to put down roots in the country. It was pretty much just a version of Google Fiber that was available to lower-income citizens in wealthier cities. However, there weren't enough of those people in Austin to make it practical for the startup to expand. And yet, Google was committed to the city, so much so that even after it was shut down it kept several employees around. Now it's sad that we won't see Gigabit LTE network service in more cities — or even for that matter, Google Fiber as a concept. When the product was rolled out, Google Fiber said it would be in at least three cities. More cities are a nice idea, but we'll have to see whether the company does any better as a solo player. In some ways, Google Fiber could almost have been a catalyst for competition in the cable industry. It was an alternative to Comcast and Time Warner, which had, understandably, taken a "we

What's New in the Photoshop Texture Brushes Download?

Paint, Gradients and Blending Modes Paint is the most important tool in Photoshop. Using it, you can layer textures, images and photographs, and even manipulate them using numerous special effects. You can learn more about Photoshop's brushes in this article: Photoshop's Gradients were introduced in Photoshop CS3. Using them, you can make subtle color adjustments with ease, and even layer such effects as glows and fades. To make a gradient, first choose the type of gradient you want to create (Gradient Type), then hold the Shift key to make sure the gradient will be applied only to the pixels that you currently have selected (Gradient Spread), and then go into the Gradient panel. You can click the Arrow button to preview the gradient as you paint. It's best to focus on the area you want to change color before you start. You can further manipulate the gradient by using the Gradient Opacity and Color-Hue and -Saturation sliders. You can use a blending mode to give textures and photographs a 3D effect. Blending modes

combine all the colors of the image into the desired color. You can use any blending mode to your advantage by mixing the existing image and foreground color with the background color you wish to be visible. Photoshop CS3 introduced Photoshop's new Smart Blending Modes, which give you total control over the mixing of colors. Read our article: [Brushes/Pens/Erasers/Safaris](#) Each of Photoshop's brushes, pens and erasers come with their own set of features, settings and characteristics. Like brushes, pens (a type of graphic pen used to make text or drawings) can be used to add textures to images, or change existing textures. You can use brush/pens to add detail to photographs, borders to add a background for a photograph, and so much more. An eraser is used to remove blemishes or other unwanted elements. Photoshop contains several versions, and each performs a different function. The one we recommend is the Pencil Eraser. It is the most basic form, and has less settings than the others. There is a limit to the number of pixels you can erase at once. The Safari is a sophisticated brush that resembles a needle-nose pen. It can
