AutoCAD has since been released as part of the AutoCAD LT product line for small business. In addition to new capabilities to support small business and home users, AutoCAD LT allows larger businesses to use AutoCAD as a client tool with the Microsoft Windows operating system. AutoCAD is one of Autodesk's most popular software applications. In 2012, CAD industry analysts reported that AutoCAD and related AutoCAD application programs generated almost \$4.9 billion in net product revenue. AutoCAD's annual revenue has grown at an annual rate of about 14% for the last 16 years. For 2016, Autodesk is projecting AutoCAD net product revenue of more than \$4.5 billion. In 2008, in addition to offering its traditional desktop software application on Mac and Windows operating systems, Autodesk launched AutoCAD 360, a web-based solution that includes several graphical views of a 3D model. AutoCAD 360 supports collaboration among multiple people in a single office and in distributed locations. AutoCAD 360's cloud-based technology is similar to what Autodesk also offers for its other software products, including Revit and Inventor. Since the debut of AutoCAD in 1982, Autodesk has had a strong focus on making AutoCAD a true desktop application for all users. This has been in part because the large AutoCAD user base comprises a large number of small business owners who desire to use AutoCAD on inexpensive desktop personal computers. Autodesk made the development of a full-featured, desktop application a priority. AutoCAD has several application modes. These modes can be adjusted based on the needs of a particular user. There is AutoCAD LT, which runs on machines with limited capabilities. There is AutoCAD, which runs on machines with capabilities similar to most personal computers. There is AutoCAD LT for Home Users, which runs on Windows XP and Windows 7. There is AutoCAD LT for Small Business, which runs on Windows XP and Windows 7. There is AutoCAD for Large Business, which
