We have found an increase in natural killer (NK) cells in human placentas, but very few cytomegalovirus (CMV)-specific human cytotoxic T cells (CTLs) compared with peripheral blood lymphocytes (PBLs). Therefore, we examined whether alloantigen-specific B cells have an effect on NK cells against CMV. CMV-specific B cells, from CMV-positive donors, were isolated by alloantigen-induced rosetting and purified by affinity selection. Purified alloantigen-specific B cells up-

regulated CD8+NKG2D+ of NK cells. Further, depletion of alloantigen-specific B cells from CMV-positive sera restored CMV-specific killing activities of NK cells to control levels. This activity was markedly blocked by anti-MHC class I antibody, but not by anti-MHC class II antibody. These results suggest that alloantigen-specific B cells may down-regulate natural killer cells (NKs) and up-regulate cytotoxic T lymphocytes (CTLs) in CMV-positive placentas, and this response may be partly mediated by MHC class I molecules.

WASHINGTON (Reuters) - U.S. President Donald Trump on Friday said he was withdrawing the United States from the landmark

2015 Paris climate agreement, a decision widely criticized by Democrats and international allies who said it would harm the environment. When asked about reports the United States was leaving the climate pact on Friday morning, Trump responded in a written statement: "I was elected on pro-America candidate because I told the truth about restoring our jobs and economy. The Paris accord is simply the latest bad deal imposed on the United States by the past administration, just one that executives from real estate companies, automakers and financial institutions want to protect." The Paris agreement was signed by nearly 200 countries in

December 2015 and covers nearly half of the world's carbon dioxide emissions, which scientists say are the main cause of global warming.

“Global climate change is an
