Autodesk's AutoCAD is designed to allow the user to perform all of the basic 2-D drawing, design and drafting functions that a typical architect, engineer or drafter requires. These functions include the creation of two-dimensional drawings, as well as three-dimensional (3-D) modeling. The development of AutoCAD started in the early 1970s, as work began on the architectural design software program called PRO-DESK. PRO-DESK would allow the user to perform the same drafting and drafting functions available in AutoCAD. In 1976, Autodesk began developing the PRO-DESK software in association with a company called Genesis Systems (now Prism Systems). AutoCAD is used by architects, designers, engineers, drafters, and many others. For example, it can be used in the construction of skyscrapers, bridges, roads, floors, drainage pipes, etc. AutoCAD's emphasis on drawing and drafting is very different from the emphasis found in other CAD software, such as the Computer-Aided Design for Architects (CAD-A), and the Computer-Aided Design for Engineers (CAD-E) that are available from other software manufacturers. The basic operation of AutoCAD relies on two different operating modes: User Interface (UI) and Alias (A), which are both used by the user to draw lines, arcs, polygons, surfaces and perform other 2-D drawing functions. The UI mode allows the user to perform these tasks directly, by choosing the objects he/she wants to create and then clicking on the tool icons (such as the pen, pencil, etc.) that allow him/her to create the necessary objects. The A mode works the same way, but it is programmed to automatically create the objects needed for the user to accomplish the task (such as the pencil for creating a polygon) that the user had previously chosen. Whenever a new drawing is created in AutoCAD, the "book" of previously created drawings is automatically saved to the drawing's drawing number (DXN) file, and the DXN file is automatically named with the drawing number. Each DXN file contains a Drawing Header section, which is the top-level (or root) part of the DXN file. The Drawing Header contains information about the drawing and a Drawing Section that contains the objects of the drawing. Each time a new drawing is opened, AutoCAD will automatically create a new DXN file

SQL Database This database is used to maintain properties for all drawings and model files. Structured query language. This is AutoCAD's native format for querying the database. Desktop publishing AutoCAD used to be able to produce both page-based and vector-based (PostScript and PDF) output. This has since been removed. AutoCAD LT (and AutoCAD Classic) now supports the export of PDF files. See also List of AutoCAD features List of AutoCAD programs List of notable

For both the mass spectrometers, an internal calibrant (lock mass compound) consisting of a hexakis(1H,1H,3H-tetrafluoropropoxy)phosphazinium ion with a molar concentration of 1 mg/mL in 70:30 (v/v) ACN/H₂O (0.1% formic acid) was infused via a dedicated syringe pump (New Era Pump Systems Inc., Boca Raton, FL, USA). For all measurements, 4 Hz electron-transfer dissociation (ETD) was used with a 1 Hz precursor ion isolation window. In this mode, a single ETD reaction is performed using both light and heavy isotope ions (C¹⁸), and isomer abundance and charge are therefore conserved. Instrument conditions for ETD were as follows: The following parameters were used for these measurements: Survey (3--8 *m*/z*) with a resolution of 60,000, AGC target of 1.00 × 10⁶, maximum injection time of 50 ms, maximum injection time of 200 ms, profile mode (average), Q3 resolution, de-clustering potential at 1.00 V, and normalized collision energy of 30 eV. Precursor isolation was set to 10, and HCD collision energy was set to 45 eV. Data were acquired ca3bfb1094
