XSD Diagram is a lightweight Windows application whose purpose is to help you open and check out the information and diagrams stored within XSD files. It doesn't leave any traces in the Windows Registry. XSD Diagram sports a clean and straightforward layout that allows you to upload files by simply dragging and dropping them into the primary panel, or using the built-in browse function. You can print or export the diagrams to EMF file format, copy the information contained within XSD files to the Clipboard, zoom in or out, as well as select the alignment (top, centre, or bottom). Besides that, you can also delete the selected lines from the diagram, and clear the entire list. One of the coolest feature offered by XSD Diagram is represented by the possibility to select between four different colours for the elements. XSD Diagram offers detailed information about the XSD file selected for viewing, containing a tabular layout, which provides specific details about each element. You can select between four different colours for the elements, which makes it easier to identify the XSD file without having to open it. XSD

mention that hotkeys are also available for a better control over the entire process, but they cannot be reassigned. During our testing we have noticed that the application offers very good image quality, loads data quickly, and no errors showed up throughout the entire process. It leaves a minimal footprint on system resources, so the overall performance of the computer is not affected. All things considered, XSD Diagram seems to be the right choice for users who are looking for an easy-to-use XSD diagram viewer which comes packed with a few configuration settings.

Q: How to check if a connection to the MySQL database exists? I'm trying to check if the connection to my MySQL database exists (because I'm using it in Android). I've tried `String url = "jdbc:mysql://"; if ( "jdbc:mysql://" == url ) { // the connection exists } else { // no connection }` I tried the above but it doesn't work, what am I doing wrong?

A: The correct way is:

```
boolean exists = true;
try { Class.forName("com.mysql.jdbc.Driver");
Connection con = DriverManager.getConnection("jdbc:mysql://localhost/bla");
exists = false; }
catch(Exception e) {
```
