I have a list of floats. My goal is to find out if each one of the list is greater than or equal to 0.0, or not. The list contains: ["-0.1", "0.4", "0.33", "-0.06", "-0.23"] I tried the following: for i in my_list: if i >= 0.0: print i I am told the order

doesn't matter. >>> i = -0.1 >>> i -0.1 >>> i >= 0.0 True How can I compare floats in a list (order does not matter)? A: floating point comparisons are only approximately equal. They may differ in cases such as -0.1!= -0.01 or -0.1!= 0.01. As this is a well known problem, Python includes a handy method called float.is_integer() which returns True if the float is an integer. >>> my_list = ["-0.1", "0.4", "0.33", "-0.06", "-0.23"] >>> float.is_integer(float(x) for x in my_list) True >>> float.is_integer(float(x) for x in my_list) False So you can just filter those out and check if you find one: >>> [x for x in my_list if af5dca3d97
