The first version of AutoCAD ran on a Macintosh computer. The software supports the Apple II, the Apple II+, and the Macintosh. The Windows operating system is not supported. The original price was \$1,495. Autodesk stated that the original version of AutoCAD was their first desktop product (after the price was lowered to \$500), and it was intended for use at the user's own desk. It was noted that the title was a play on the word "autocad", pronounced "auto kad". It was designed to allow users to create their own customised drawings and make them completely unique. The price of AutoCAD has remained \$1,495 since 1982. The full name of the software is AutoCAD, with the "Auto" prefix meant to describe the user experience. "CAD" means "computer-aided design", and "drawing" means creating a model or drawing with a computer. The system is based on 3D modeling and drafting, and it is a separate application from a 2D drafting program such as Corel Draw, Visio or even Adobe Illustrator. The current version of AutoCAD is AutoCAD 2018 (released in December 2017), which has been replaced by AutoCAD LT 2019 and AutoCAD 2020. New features for AutoCAD 2020 include a "connected tooling" feature for faster and more accurate connection of tool and device to the model, additional pencil and eraser tools for editing, and a more convenient color palette. The last new feature, "Ghost Mesh", is a new drawing mode that allows users to make cross-sectional views of a 3D model as regular 2D drawings. Trademark history Prior to the name Autodesk, the software was known as AutoCAD, Computer-Aided Design, and Computer-Aided Drafting. Other names for the original AutoCAD include CAD, Computer-Aided Drafting, Drawing System, and DRS (the initials for "design"). In early versions, the software was available for use on Macintoshes only. In 1982, Autodesk changed the name to Autocad. Another earlier name for the software was "Computer Drafting System", with a trademarked logo of a hand and arrows. Physical appearance Autocad is a desktop application, consisting of three main components: the application window (the window containing

1.2. Using the API In order to develop a VBA macro, you must first download and install the AutoCAD API from the Web. The only prerequisite is that the API is enabled and that the AutoCAD component for Visual Basic for Applications is installed. After installing the component, the API is available on the Tools tab of the ribbon in the VBA editor (see Figure 1.1). * * * **NOTE** The AutoCAD API is only available to customers using the original software release. If you are using the subscription service, you will need to access the API through the web-based API manager. **Figure 1.1** The API is available on the Tools tab of the VBA ribbon. For users upgrading from the original release, the API is only available through the Web. If you have upgraded to the subscription service, the API is available through the web-based API manager. Once the component is installed, you can begin to use the API to create custom macros af5dca3d97

Mike says Jeff is about a half hour away from making his decision, and he will call me on his cell phone as soon as he knows. He might call Jeff when he gets to Kinko's, or he might wait until he gets home. I will leave you several messages while I'm there. Kay PS. The plant is cold today.Q: Efficient algorithm to find if a map is convex I need to test if a map is convex (as in the "box" part of convex hull). Say, for the map [0, 2], the answer is YES. For [0, 1] NO. What is the fastest way to find out if a map is convex? A: A map from points $(x_1, y_1), (x_2, y_2)$ in the plane to points $(u_1, v_1), (u_2, v_2)$ on a line can be found by the following: The first two points have x -coordinate 0 The second two points have x -coordinate 1 Each point (x,y) then determines a line $x = a+b \cdot y$. The slopes a,b are the values of u,v . In your case, the map is $f(x, y) = \left(\begin{array}{cc} \sqrt{x^2+y^2}-x \\ \sqrt{x^2+y^2}-y \end{array} \right)$ The line $x = a+b \cdot y$ is then $f(a+b \cdot y, y) = \left($
