Over that period of time, CAD tools were introduced and marketed to the industry for use in mechanical design. AutoCAD has grown in complexity and capability over the years. Today, it supports the drafting of general, architectural, and structural design projects. AutoCAD also supports construction documentation for design-build projects. AutoCAD is widely used by the AEC industry for AutoCAD Architecture, AutoCAD Civil 3D, AutoCAD Electrical, and AutoCAD MEP. AutoCAD Architecture is a feature of AutoCAD that allows the creation of architectural models. The architectural drawing, with its accompanying project data, is used to develop building drawings that are used to construct a project. AutoCAD Architecture can create a large number of architectural models, including: 3D construction models 2D construction drawings 2D construction ortho views 2D construction perspective views 2D construction top views 3D models of buildings An architectural model of a building is a representation of the project with a realistic appearance of the building's physical parts and surfaces.
