Contents AutoCAD was first released on December 2, 1982. Autodesk established Autodesk University (AU) in the United States in June 1987 as the first university in the world dedicated to computer-aided design and computer-aided manufacturing. AutoCAD was the first major application program developed at AU. The program was one of several initial projects to be developed for the university in June 1987. The first version of AutoCAD was released in December 1987. Other early software developed at Autodesk University: GEMS (Graphic Environment for Microcomputers) was the first product made by Autodesk. It was originally developed in 1982 as a DOS-based graphics software program, based on a proof-of-concept GEMS program Autodesk first developed in 1983.

Design Review was Autodesk's first integrated desktop CAD system, released in 1984. It was designed to run on the Xerox XDS 200 and XDS 70 Graphic Arts Systems. CAD Index, released in 1989, was the first digital chart of graphical symbols for computer-aided drafting. LPS was Autodesk's first large-scale engineering software, released in 1990. It was the predecessor to AutoCAD. Autodesk University (AU) is one of Autodesk's software developer teams, focusing on developing AutoCAD and other major programs, such as e-Learning, Manufacturing Suite and Architecture & Engineering. AU also develops technical software for the graphic design industry. Since its founding in 1987, Autodesk University has released over 450 new products and over 500 annual versions of existing software. AutoCAD is available as a desktop application, mobile app, or as an online cloud service. AutoCAD desktop and mobile apps, as well as the cloud service, are all licensed by Autodesk. A small number of Autodesk Certified Trainers (ACTs) are allowed to sell their own products in some countries. ACTs are also able to offer their training courses and materials for free. ACTs use Autodesk's products to deliver their courses. In 2018, AutoCAD was the first Autodesk product to reach one billion annual licenses. The first successful community-created add-on for AutoCAD, AutoCAD LCARS (Linux & Macintosh), was released in 2011. History 1982-1987: The First Dec

An earlier study suggested that myometrial gap junction activity is modulated by the level of plasma triglycerides. To test this hypothesis, aortic endothelial cells and myometrial cells were isolated from adult female rats fed a normal fat (NF) diet or a high fat (HF) diet for two weeks, and the inhibitory effect of exogenous palmitate (0.1-1.0 mM) on myometrial gap junctional intercellular communication (GJIC) was measured with a scrape-loading and dye-transfer (SLDT) technique. In contrast to endothelial cells, myometrial cells showed little intercellular communication. Exogenous palmitate, at 0.1-1 mM, was much more effective than oleate (0.1-1.0 mM) in inhibiting GJIC in the myometrial cells. Similar results were obtained when the intercellular communication was measured with the Lucifer yellow technique. The results from the in vitro study were confirmed in vivo. The myometrial gap junctional activity and blood triglyceride levels were significantly higher in rats fed a HF diet than in those fed a NF diet. af5dca3d97

After Hurricane Katrina in 2005, a wave of criticism of government and industry swelled when it was discovered that their cleaning-up efforts had contaminated the Gulf of Mexico with oil that had been churned up by the storm. But the failure to deal with the aftermath of an oil spill has recently emerged as the most serious threat to the wetlands, says Philippe Colombet, an ecologist with the World Wildlife Fund (WWF) in Malaysia. Since the oil spill from a tanker in Vietnam in August, there have been a number of other oil leaks from barges and other ships. And each time, the crude oil has drained into the numerous channels and ditches that criss-cross the wetlands, threatening to pollute the mangrove forests, salt marshes and other ecosystems. "We estimate that on the coast, in Malaysia, between 10,000 and 40,000 tons of oil a year have gone into the mud and then to the sea, and that is a lot of oil," says Colombet. "It is very high in sulphur and will take a long time to degrade, and we don't know what is going to happen when all that oil hits the sea." The WWF has launched a campaign called Wetlands in Oil, with the aim of raising awareness and urging authorities to quickly and properly clean up spills of oil and other toxic waste. "There is only one way to stop this pollution," says Colombet. "And that is to stop the leakage." Wetlands are the world's most biodiverse ecosystems, but they are a vital source of fish and food for the communities that
