The following manual has not yet been translated into Swedish.Detection of object motion in time-reversal holograms using complex optical field decomposition. We propose a new technique to extract object motion from holograms. We use the inherent ambiguity in the Fourier-like representation of the optical field along the time domain and that in the frequency domain. The method works for the case of holograms of any spatial sampling rate without aliasing problems, whereas other methods are needed for proper reconstruction of a hologram from multiple information from multiple realizations. Applications include tracking movement of the object,

---

detection of an object moving in and out of the field of view, and video recording of moving objects. Q: Difference between `image` and `img`? A: IMHO, `image` implies a system or what is in the format whereas `img` gives a more personal feeling of the image. `image` is the image of a product, a pattern, a method, a technique. I.e. thinking of a type of a thing, not the image of a person. `img` can be thought of as the image of a person, or of a situation. A car's `image` might be its model number, its specifications, its capabilities, its fuel consumption. A person's `image` might be their personality. Q: How is it 6d1f23a050
