A: Your below code is wrong. 'top_news.company' cant be used in where clause. You need to include where clause directly. \$result = DB::table('top_news') ->leftJoin('registrations','top_news.id','=', 'registrations.news_id') ->where('top_news.company','=', \$company) ->get(); Q: How to get Windows ODBC DSN Data Source Name from ConnectionString using Java? 6d1f23a050
