WWE2K14ISOSTASHGAMINGiso Fasciola hepatica (Fasciola hepatica): DNA damage at the nucleoside level. Abnormal and premature cell death of flukes' intestinal wall fibroblasts was observed in our earlier work (D. Dokic et al., J Parasitol 93 (2007) 713). Now, three of the hypothesis (epoxidation of DNA, reduced pool of dGTP and deficiency of thymidine kinase) responsible for DNA damage in flukes' intestinal wall fibroblasts were tested in this paper. As a DNA damaging agent, nitrous acid was used in order to damage intracellular DNA. Flukes' intestinal wall fibroblasts were exposed to different

concentrations (0.5 and 2 mM) of this chemical. DNA damage was tested using two end-point methods: single cell gel electrophoresis (SCGE) and immunocytochemical examination of γ -H c6a93da74d
