superior drummer 2 also includes a wide variety of sounds from around the world, some that are free and some that are available for purchase. superior drummer lets you choose from a wide variety of high-end drums and drum kits that are also available as a vst plugin. if your goal is to create a kit that allows you to record your drums and play with the midi grooves, superior drummer 2 is for you. superior drummer lets you drums rather than drums, allowing you to create complex midi grooves, patterns, and beats using a virtual instrument that lets you make your own drums. you can also adjust the settings of the various elements of the grid, such as the beat patterns and patterns, different types of drum heads, sound areas, kick/snare shapes, tom depths, and more. i think that if you have any midi mapped to pads, you should be fine to edit from the midi panel. midi is just a stream of numbers, so if you map some notes to a specific pad on the keyboard, you should be fine. however, a pad may map more than one note, and that would be the problem. so i think youre better off mapping your pads using superior drummer's midi panel to avoid those issues. you would need to check with the sound libraries to see if the sound you need is available. i recommend superior drummer for a beginner because it is a very good piece of software with lots of great sounds. if you want to learn more you should check out ableton live. i have superior drummer and i love it. i use it mostly for vst plug-ins and i also like to make my own instruments. i do use midi tools from logic but i prefer to use superior drummer for it's simplicity and it's ability to map. you can also map midi data to superior drummer. as far as other libraries, i have not tried them. if you do try them, let me know what you think. 5ec8ef588b
