autocad is a powerful and popular application that has gained a large following. its main strength is in the 2d drafting and designing of engineering, architectural, and construction drawings. however, there is also functionality for designing in 3d as well as many other functionalities. these include tools for scheduling and project management, linkages, vector graphics, 2d/3d plotters, and even some data management tools. and thats it! congrats you flashed the firmware! now you can download and flash other custom dd-wrt firmware. just make sure its no bigger than 8mb and is specifically for the e2500! follow the same procedure above to reflash. i honestly didnt see that many more new features in the big firmware than in the mini, so i may try another one. autocad 2019has more intelligent tools and richer design features with new smart dimensioning, and stunning visual experience. it has a separate license for free to students, educators, and educational institutions,with a 36-month renewable license available. but in the student version of autocad, there is one exception that dwg files created by using the student version havean internal bit-flag set means the educational flag. when such dwg files are printed by any version of autocad, the output includes a plot stamp/banner on all four sides of the printed result. thats why objects created in student version cannot be used for commercial purpose. autocad 2019has more intelligent tools and richer design features with new smart dimensioning, and stunning visual experience. it has a separate license for free to students, educators, and educational institutions,with a 36-month renewable license available. 5ec8ef588b
