Adobe Photoshop, created by the Adobe company, is one of the most well known creative design platforms. Thankfully, Adobe has not changed what makes Photoshop good to this day. Photoshop has a very user friendly interface, which makes it easy for inexperienced users to use. However, if you are familiar with Photoshop, updating the software to version 10 will be an upgrade and you'll be glad of that. Adobe Photoshop is still the best way of editing photos, buying the update will give you new features, functions, and other enhancements that you'll love. Aside from many features of Adobe Photoshop, they have also incorporated some of Sketch App's functionality and design. Thus, if you're a budding artist, you can now create artwork with ease and with all the speed of Adobe Photoshop. Adobe Photoshop CC is somewhat more popular than the rest, and the new updates will make it easier to handle the file types and to learn some features. The features of the program still remain the same, allowing you to view your photos in different, unique ways. The updates are adding new updates to the platform to allow you to enhance your skills and help you place more images on jobs and social media. Other highlights of the update include Adobe's improvements to Background Erase, introducing Refine Edge, the ability to change the way the tools change colors, and the new Write a Comment feature—which allows visitors of your Photo Stream to leave reviews. You can also now invite people to comment on a photo using the newly updated Create a Link Beta feature. While Photo Streams conversations are useful for ad hoc comments when you're editing, Create a Link is designed for more formulative comments that can be added to the photos in your stream.

Adobe also added a handful of little tweaks. When importing images, you can now choose a location, choose to keep originals, and move originals out of the way. When selecting a particular Edit option for the photo, you can now preview the selection before and after making it. And after upgrading to Lightroom 5, a "Restore default settings" option can be found in the Edit menu for all brightness and contrast adjustments. But aside from those things, Adobe remained steadfastly ornery and didn't ever take my advice.
