Using a strong password allows not only to prevent identity theft, but also to ensure that your data and personal details are kept private. If you follow the abovementioned rules, the probability of someone gaining access to your personal data is minimal. CRYPTWIZ KeyGenerator Description: CryptWiz KeyGenerator - Password Generator is designed for Windows Vista, Windows XP, and Windows 2000. The software enables you to generate up to 160 different keys, each one of them perfectly tailored to the requested login-password, as well as some additional options like: Maximum number of character, minimum length, last character, to list only some of them. Using a strong password allows not only to prevent identity theft, but also to ensure that your data and personal details are kept private. In case you configure a weak password, the application generates a table with the same properties of the actual password. In case the weak password is encrypted with an existing password, the encrypted password can be cracked by using the password to decrypt it. On the contrary, a strong password generates a table with a different password, so that even if the encrypted key is cracked, the encrypted password is different and can be decrypted. For example, a weak password "123456" is encrypted using the password "456"; if you decrypted it using the password "12345" you would get the same results, since both passwords generate the same encrypted key. On the other hand, a strong password generates a unique encrypted key, so even if the password is cracked, the encrypted key is different and therefore, the user can decrypt it. As soon as the configuration is completed, you can create a new password, or review the generated table and select the one you need. Once the configuration process is completed, you can check whether the generated password is strong, or configure an old or new password. For this, you only have to select the type of password (strong/weak) and press the "Generate" button. At that point, the program generates the password, as well as a table with the same properties.
