Spek Crack Download For Windows [Latest-2022]

Spek is a lightweight Windows application whose purpose is to help you build the spectrogram for an audio file in order to analyze the frequencies comprised in a sound. The layout is intuitive enough to be configured without having to consult a help manual or watch online tutorials. The program uses the GNOME platform which includes the Lib, GTK+, Cairo, Pango, as well as the FFmpeg libraries. Spek was designed with an overall simplicity in mind, so it doesn't comprise many configuration settings. You are allowed to upload the audio files into the working environment using the built-in browse function or "drag and drop" operations. As soon as you add an audio file, be it a lossy or lossless compressed audio format, the tool automatically generates its spectrogram in the primary panel. Last but not least, you are allowed to export the spectrogram to PNG file format and use hotkeys for a better control over the entire process (they cannot be reassigned). Since it doesn't require much computer knowledge to work with this app, even rookies can master the entire process with minimum effort. During our testing we have noticed that Spek carries out a task quickly, and no errors showed up throughout the entire process. It is not quite friendly with system resources, so the overall performance of the computer may be hampered. To sum things up, Spek offers a simple yet efficient software solution when it comes to helping you generate spectrograms. It can be easily installed and configured by all types of users, regardless of their experience level. What's New In Spek?

Are you looking for an easy to use application to generate a spectrogram for an audio file? Spek is an easy to use, lightweight and user-friendly application designed for Windows (tested on Windows 7, Windows XP, Windows 2000, Windows Vista and Windows 8.1). Spek can be used for music

visualization (analysis), managing audio files and computers. Spek is a simple application designed to enable you to generate a spectrogram for an audio file and analyze its frequencies. The layout of the application is intuitive enough to be easily configured without the need of consulting a help manual or watching online tutorials. The application uses the GNOME platform which includes the Lib, GTK+, Cairo, Pango and the FFmpeg libraries. Install Spek is as simple as opening the package in your Windows Explorer and pressing the install button. Once the application has been installed and launched, you are then free to upload your audio file into the working environment and get started. If you choose to export the generated spectrogram to a PNG image format, the tool offers you the possibility to add hotkeys to control the process in a simple way. When it comes to audio file types supported by Spek, you are able to upload lossy and lossless compressed audio formats (such as MP3, FLAC, Ogg Vorbis, AAC, AIFF, etc.) and even files using the compressed WAV format (the application generates the spectrogram for a generic.wav file). As soon as you upload your audio file, Spek automatically generates the spectrogram. The program can be configured to show the spectrogram in a split window mode, so you can view both the spectrogram and the audio file together. When it comes to configuring the layout of the application, you have some default and sensible settings to choose from. For example, the spectrogram will be automatically aligned to the left side of the workspace and you can either zoom in or out by double clicking on the mouse. When it comes to determining the time that you want to analyze the sound, you are able to select from the following options: • From 0 to the duration of the sound file; • From the moment when the sound started to when the sound finishes • From the moment when the sound started to the current time To determine the frequency ranges you want to analyze, you are allowed to select from the following options: • 0 to 1.9 kHz; • 1.9 to 5.9 kHz; • 5.9 to 14.1 kHz; • 14.1 to 23.7 kHz; • 23.7 to 50 kHz; • 50 to 100 kHz; • 100 to 200 kHz; • 200 to 500 kHz; • 500 kHz to 1.5 MHz
