I have been using Photoshop for long and I can say that it is a true masterpiece in the field of photo editing software. The new Bridge that ships with all versions of PS also shows a watchful attitude towards the users.

Don't think it is very difficult to learn when it comes to it. I used to have ati pro 3d xl cards in my pc, I upgraded it to core 2 duo 2gigs ram 500gb hard drv and I never want to go back to those ati because whenever I use it my computer will freeze, stutter and lag. With my new pc and new card I am happy and I dont have an issue when I use photoshop its so smooth and it loads up really fast. If you are using vista I suggest to upgrade your computer because it really doesnt add to your pc performance.

Don't be afraid to look at photoshop we have lots of tutorials and you will be up and running in a matter of minutes. As a total lay person, this is the first digital photos I have ever used to be able to do anything other than warm and cool. After all, my images that I had taken have been flattened. So here I am basking in grad student glow. Our good friend Andrew Beasley has an excellent review of the best things that have happened to the software in recent memory. Just a word of warning (if you are a pro, which I assume you are) Andrew says to be careful when you edit images because it is not possible to undo or revert (with some editing, actually the undo button is there under the shortcut key). To be honest, I don't know. What I do know is that this software is a precision instrument. It needs to be because the feedback, both positive and negative, is what makes it work.
