And I haven't encountered any situation where the upgrade either failed completely (uninstalled the app) or required manual re-entry of sensitive data (like passwords, etc.). How likely is it that a future version of Android will stop my app from functioning (i.e. updates will disable my app, or I have to re-enter my device settings/passwords, etc.? Is it possible to keep an application running for a while after the upgrade is done and the app is removed from the device? When I first used Android, I thought of the 3D games like "Galaxy Defense!" and other such titles that were always around even after the device is upgraded. I wonder if Google could put similar apps and game engines in their Android operating systems. Thanks. A: Your phone remains on while upgrading. So if you have an "auto-upgrade" function, your phone will be upgraded when it reboots. Usually when upgrading your phone, it reboots a second time and will release any version that was on it before (usually to free up some RAM). As for the second part of your question, no it's not possible to keep an application running during upgrades. An upgrade is a clean install. All data and settings get overwritten. The piezoelectric element is composed of a wafer and electrodes, each being made of a metallic sheet, which are joined together at both ends of the wafer. When a voltage is applied to the electrodes, the piezoelectric element will be deformed to store energy in its interior. Conversely, when a voltage is removed from the piezoelectric element, the piezoelectric
