The base/universal edition includes a great many of the included features, including 16-bit editing (that means that Elements can work with 16 million colors or shades, allowing for some incredible color range), sharpening tools, layers, transparencies and other advanced tools. The program comes with a version that costs \$79 per year (\$8.99 per month) at no charge until 26th April 2020 (when it's free) If you want the full set of tools, the upgrade costs \$229 Adobe Photoshop is the most popular and user-friendly photo processor and one of the best photo editing software in the world. It is a complicated yet easy-to-use package that if bought by amateur users will provide them with great image editing features. If you are a photographer, portrait artist, image creator or Photoshop users only, then I think you should not delay buying this software. Adobe Photoshop is the most popular photo editing software. Unlike other online photo editors, it has all the features that a photographer or a retoucher might require. You need a subscription and a reasonably fast internet connection to use the software effectively. I like Photoshop because it is a passion and I love to use it for many different things, the only thing is that it's a bit outdated. It is a good software for pictures, and the only drawback I find in this software is that it is not good for videos. Sure, it is on point when it comes to editing and enhancing photographs, but when it comes to editing and enhancing videos, it is not of any use since it's not compatible with the latest technology of editing and enhancing videos. So, I would say that this is the only drawback in this software.
