Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Adobe Premiere Rush is a different animal from Premiere Pro for iPad. It's an app that uses a timeline to record photo and video clips, then you can speed through them and apply edits to them. There's no commitment to making your edits as you see them, so don't expect to wake up in the morning and wonder what you were doing last night. It's more about making a quick edit and promoting it on social media than it is about making a great looking presentation. It's beautifully done, though, and will save you from some online scrap booking. If you're still using a Mac and can't bring yourself to pay a lot for a new Mac Pro, Adobe Photoshop Mix is the perfect app for you. It doesn't make much sense on Apple's current MacBook Pro and MacBook Pro with Touch Bar laptops. Assuming you don't want to go full Pro, it's reasonably priced on a new MacBook Pro, the 13-inch MacBook Pro, or even an entry level MacBook Pro. You get all the tools necessary to create a photo look book (and print it might I add). It's like iOS 7, with a better UI and a lot more features. There are a lot of great new features, including an initial iCloud Photo Library, more filters, iOS keyboard shortcuts, new Paper Settings, and the ability to set your favorite photos as the Lock Screen background photo. Even the camera app has been redesigned to make it more intuitive to move around. You can now zoom with a pinch, and the various sliders have been moved to the right side of the viewfinder and indicate the focus point. All of this helps to make a difference when it comes to taking major selfies. You get a lot more with respect to editing as well. There are more tools in each of the layers, including the Spot Healing Brush. All of the adjustments that you make in the layers are color-brushed on to the main image, which is a very nice touch.
