Lightroom 5's journal is another necessary update. I hate being tied to my device, and being able to keep files on a network server, such as Dropbox, would be useful. Unfortunately, Creative Cloud doesn't offer such a feature. Editing images, organizing photos and assigning keywords, titles, hashtags and comments on social media are all things that should be done first on a computer and then exported later when the time is right. Lightroom 5 won't add this feature, and Adobe highlights this by telling you to "Get your hands dirty and edit right now." However, data health monitoring is handled more effectively in this version of Lightroom. The development team has done a great job of explaining the features in the interface and how and when they may affect your workflow. Importantly, the thumbnail shows where the image has been cropped. Lightroom 5 also offers the ability to tag images using their copyright, artist, keywords and location information. These tags are reliably found and assigned, and the photos are organized by the search results. Lightroom currently has a database of over 80 million images with over 90 million keywords. At the very least, version 5 is a solid version of Lightroom. There's a lot of new stuff to play with, but at least most of the typical user will be satisfied. Currently, you can buy Lightroom 5 for \$119.99 (as of this writing). Hopefully, in months or years to come, the new professional user will be able to justify paying for it. Imagine that...a serious photographer could spend \$120 on a program that makes it easier for him or her to work.
