Ryse: Son of Rome is an action game developed by Crytek and published by Microsoft Studios.. Use a strong force but always be careful so as not to get too close. .Suspensions for the back support in a vehicle comprise two kinds of vehicle: truck and sedan. The sedan is a popularly-used vehicle, especially in Europe. However, the suspensions in the sedan have the disadvantages of poor comfort feeling, too high cost, etc., and therefore the sedan-made suspension cannot meet the requirements of comfort feeling and road performance. Accordingly, there are many truck-made suspensions on the market. However, the truck-made suspension mainly is for the suspension of middle or heavy-duty truck, such as the truck, which has a large frame length. For the sedan, due to its small frame length, it is hard to make a heavy truck-made suspension. According to different vehicle-made vehicles, the suspensions are generally divided into three parts: a front part, a rear part and a middle part. The front part serves to connect two wheels on a front end. The rear part serves to connect two wheels on a rear end. The middle part is mainly used to connect a frame with a vehicle body. The front part is directly connected to two wheels, whereas the middle part is connected to a frame, such as a crossbar or a chassis. The rear part has the problem of too small swing angle. Therefore, it is a big challenge for the truck-made suspension manufacturers to design a good front suspension for the sedan.
