I guess that downloading Photoshop CC right after a major release of Photoshop Pro and Lightroom has something to do with it. I remember when I first tried Photoshop it didn't exist, so I think that Adobe was smart to release it just like that. It looks like there are currently 273,930 active users. Although this is nothing impressive compared to the next version, I only have about a thousand active users. So I don't have any users to check if my criticism is right. This is going to bring automatic retouching into the 21st century. Getting older, Photoshop has lost some of the cool stuff it needed to appeal to me at first. The AI tools bring in some of that back. If you are a pro or serious hobbyist photographer who needs a solid photo editing app to work with, Lightroom is still the gold standard for professional photo editing software.

Using the app's numerous editing tools, you can eliminate distracting background noise, remove blemishes and edit color balance.

This is a perfect example of workflow and collaboration in Photoshop. Extending Photoshop's selection tools, Adobe added enhancements to its Content Aware tools, including the ability to work on a single layer and multiple layers, plus a one-click selection tool that works on document and canvas elements alike. The community continues to help shape every piece of Adobe’s software. Help from our team and the community has been integral to the success of our products. Here are the milestones to show how the community has helped shape Photoshop for years to come: Features from the “Paint” area can be seen through the Photoshop “Classic” theme. This theme does not change the editing experience, but provides a cleaner look and feel. Stay tuned for more details on this feature coming in updates. The “Default” theme is the one shipped with the software by default. Features from the “Default” area appear on the left-hand side of most interfaces and the “Clean” and “Classic” themes have two sets of icons for the “Default” area. With the introduction of the Smart Objects and Content-Aware Fill, we wanted to provide access to these features for people who do not want to define the changes needed by being pixel-perfect; instead, they can use the content-aware fill algorithms to smartly fill areas of an image. This functionality is available to the “Default” theme in Photoshop. In 2019, we updated the user interface to offer a new look and feel. We’ve added a new visual style, refined existing visual styles, and have introduced new artboards and the ability to better manage screen and window layout for new and existing features. By default, you will now see a black and gray look, which provides a lighter and cleaner look. The “Clean” theme offers more of a Modern/Colorful look, while the “Main”

theme has a very similar look and feel to the default approach offered in previous versions.
